L'ACOUSTIQUE INVISIBLE

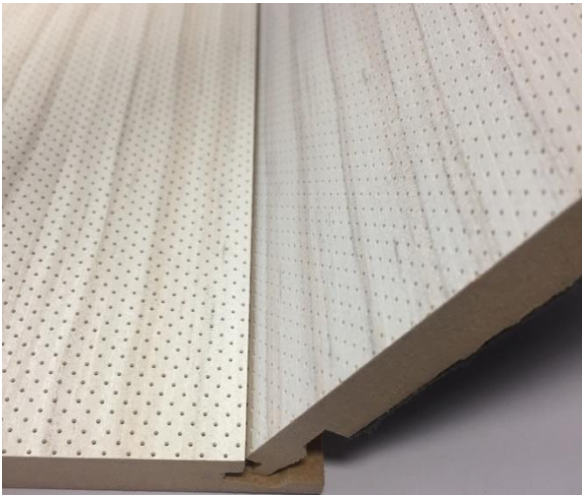

**REXWALL® ACOUSTIC** Absorbent Panels are an innovative solution for the correction of frequency reverberations of the human voice.

This range of acoustic panels improve the acoustic comfort by sound absorption and reduction of reverberations in a room.

**REXWALL® ACOUSTIC** panels will ensure optimal results due to their invisible micro-perforation technic.

**REXWALL®** is the only manufacturer able to offer you a permanent stock of acoustic panels references **veener**, **laminated** or **mélamine**, deliverable within 2 weeks.

**REXWALL® ACOUSTIQUE** is a revolutionary MDF wall design concept, with a micro-perforation of 137,000 holes / m<sup>2</sup>.

These panels with invisible clip joints have an exceptional sound absorption coefficient of 0.75  $\alpha_w$ , which is highly aesthetic for new and renovation buildings.

Acoustic drilling and assembly technologies are registered and allow these acoustic panels to be installed quickly and easily. The installation is 3 times faster than traditional system.

The end result is a scratch-resistant acoustic wall with easy maintenance.

### **The standard dimensions of the panels are as follows:**

For veneer: Height = 3020mm - Width = 600,5mm (useful 584mm) - Thickness = 11mm

For laminate: Height = 3020mm - Width = 600,5mm (useful 584mm) - Thickness = 10mm

For melamine: Height = 2820mm - Width = 508mm (useful 491,5mm) - Thickness = 10mm
